INSTITUTE OF PHYSICS

The Institute of Physics is a leading international professional body and learned society, established to promote the advancement and dissemination of a knowledge of and education in the science of physics, pure and applied. The Institute has a world-wide membership and is a major international player in:

- Scientific publishing and electronic dissemination of physics;
- Setting professional standards for physicists and awarding professional qualifications;
- Promoting physics through scientific conferences, education and science policy advice.

The Institute works in collaboration with national physical societies, sharing information and working jointly to promote the interests of physics, and makes its educational materials, policy statements and other services available internationally. It plays an important role in transnational societies such as the European Physical Society and represents British and Irish physicists in international organizations.

In Great Britain and Ireland the Institute is active in:

- Providing support for physicists in all professions and careers;
- Encouraging physics research and its applications;
- Providing support for physics in schools, colleges and universities;
- Influencing government and informing public debate.

FOREWORD

Since the 1970s, the Institute of Physics has carried out an assessment of Physics and Physics-related programmes at Institutions throughout the UK and Ireland. The purpose of such assessment was to identify those courses which would satisfy the academic requirements for Membership of the Institute.

In 1993, the Council of the Institute authorised the introduction of a new, formal process of Accreditation.

The primary aims of accreditation by the Institute are:

1. To provide an independent, rigorous and valid assessment of physics degree programmes;
2. To provide a means of supporting the standing of individual physics degrees and physics departments;
3. To make it easier to establish and promote the standing of UK and Irish degree programmes in the rest of Europe and in the wider international context;
4. To give potential students a guarantee that a degree will satisfy the academic requirements for Membership and provide a route to Chartered Physicist Status;
5. To provide a means of enhancing the standing of physics and physicists.

In 2007 the Institute of Physics revised the requirements for Chartered Physicist status. The current educational requirement for CPhys is an Institute of Physics accredited integrated Masters degree. Graduates with an accredited Bachelors degree partially fulfil the educational requirements for CPhys but will have to demonstrate equivalence to an accredited integrated Masters degree during the application process.

Accreditation is subject to periodic review and only undergraduate honours and integrated Masters degrees are included. The Register is not a comprehensive list of degree programmes and exclusion of a degree does not necessarily imply that it does not meet the standards for accreditation.

FORMAT OF THE ENTRIES

Degree programmes are listed under their respective Institutions in the following format:

Degree Designation	Degree Title	UCAS Code	Accreditation Review Date
BSc	Physics with Astrophysics	F3F5	30 Nov 2015
MPhys	Physics	F303	30 Nov 2015

All degree programmes are at Honours level. Provisional accreditation indicates that the degree programme is new. Conditional accreditation indicates that the Institute has agreed to accredit a degree on the understanding changes are made by a specified date.

Usually the review date will be the same for all degrees at an Institution; where this is not the case the reason would normally be that students will not graduate with the degree in question past this date.

The Institute of Physics is a leading scientific society promoting physics and bringing physicists together for the benefit of all.

It has a worldwide membership of around 50 000 comprising physicists from all sectors, as well as those with an interest in physics. It works to advance physics research, application and education; and engages with policy makers and the public to develop awareness and understanding of physics. Its publishing company, IOP Publishing, is a world leader in professional scientific communications.
