### IOP membership consultation on future strategy

Without concerted effort from the physics community and others:

- We will not have the diverse community of physicists we need to meet the growing national demand in our schools, universities and businesses or to maintain the future health of the discipline.
- Physics will not receive the funding and investment it needs to remain world class and fulfil its potential to deliver high-quality research, high-value jobs, higher levels of national productivity and strong and prolonged economic growth.
- The public will continue to find physics inaccessible and this will hold us back as a society from enjoying physics, understanding the value of physics, and it will weaken public participation in debate and dialogue about some of the big societal challenges we face.
