INSTITUTE OF PHYSICS

The Institute of Physics is a leading international professional body and learned society, established to promote the advancement and dissemination of a knowledge of and education in the science of physics, pure and applied. The Institute has a world-wide membership and is a major international player in:

- Scientific publishing and electronic dissemination of physics;
- Setting professional standards for physicists and awarding professional qualifications;
- Promoting physics through scientific conferences, education and science policy advice.

The Institute works in collaboration with national physical societies, sharing information and working jointly to promote the interests of physics, and makes its educational materials, policy statements and other services available internationally. It plays an important role in transnational societies such as the European Physical Society and represents British and Irish physicists in international organizations.

In Great Britain and Ireland the Institute is active in:

- Providing support for physicists in all professions and careers;
- Encouraging physics research and its applications;
- Providing support for physics in schools, colleges and universities;
- Influencing government and informing public debate.

FOREWORD

Since the 1970s, the Institute of Physics has carried out an assessment of Physics and Physics-related programmes at Institutions throughout the UK and Ireland. The purpose of such assessment was to identify those courses which would satisfy the academic requirements for membership of the Institute.

In 1993, the Council of the Institute authorised the introduction of a new, formal process of Accreditation.

The primary aims of accreditation by the Institute are:

1. To provide an independent, rigorous and valid assessment of physics degree programmes;
2. To provide a means of supporting the standing of individual physics degrees and physics departments;
3. To make it easier to establish and promote the standing of UK and Irish degree programmes in the rest of Europe and in the wider international context;
4. To give potential students a guarantee that a degree will satisfy the academic requirements for Membership and provide a route to Registered Scientist, Chartered Physicist and Chartered Scientist Status;
5. To provide a means of enhancing the standing of physics and physicists.

In 2007 the Institute of Physics revised the requirements for Chartered Physicist status. The current educational requirement for CPhys is an Institute of Physics accredited integrated Masters degree. Graduates with an accredited Bachelors degree partially fulfil the educational requirements for CPhys but will have to demonstrate equivalence to an accredited integrated Masters degree during the application process.

Accreditation is subject to periodic review and only undergraduate Bachelor, integrated Masters and MSc degrees are included. The Register is not a comprehensive list of degree programmes and exclusion of a degree does not necessarily imply that it does not meet the standards for accreditation.

FORMAT OF THE ENTRIES

Degree programmes are listed under their respective Institutions in the following format:

Degree Designation	Degree Title	UCAS/CAO Code
BSc	Physics with Astrophysics	F3F5
MPhys	Physics	F303

All BSc and integrated Masters degree programmes are at Honours level; ordinary degrees are not accredited. Provisional accreditation indicates that the degree programme is new. Conditional accreditation indicates that the Institute has agreed to accredit a degree on the understanding changes are made by a specified date.

The Institute of Physics is the professional and learned society for physics in the UK and Ireland, inspiring people to develop their knowledge, understanding and enjoyment of physics.

We work with a range of partners to support and develop the teaching of physics in schools; we encourage innovation, growth and productivity in business, including addressing significant skills shortages; and we provide evidence-based advice and support to governments in the UK and Ireland.

Our members come from across the physics community, whether in industry, academia, the classroom, technician roles or in training programmes as an apprentice or a student.

However our reach goes well beyond our membership to all who have an interest in physics and the contribution it makes to our culture, our society and the economy.

We are a world-leading science publisher and we are proud to be a trusted and valued voice for the physics community.
